2 Korean news

2.1 Dr. Yoo Do-yeol, return to Korea from US. Sharing his story

Dr. Yoo Do-yeol, a renowned Korean Oriental Medicine practitioner who helped establish traditional Korean medicine in the U.S. over 50 years. His journey started in 1990, where he served as president of various U.S.-based Korean medical associations, advocating the integration of traditional remedies like deer velvet. Dr. Yoo reflects on his early experiences, emphasizing the dedication and traditional methods that shaped his career.

"In 1968, the traditional method of dispensing traditional herbal medicines was still in its infancy: unlike the mechanised process of modern manufacturing, the medicine was made in small batches of less than 10 consumption, and the prescription was written on the back of the bag, one pack, one pack, and a paintbrush, explaining how to decoct them in a pot over an open fire.

It was also a time when eye drops were scooped out of the water, fanned over brazier charcoal, carefully decocted, wrapped in a burlap sack, and squeezed into a porcelain bowl with a stick, as this was the only way to ensure that the medicine would work for the patient who was receptive. This was probably the peak of the industry.

Epecially precious medicinal ingredients such as deer velvet were treated strictly. To make deer velvet daebotang, the antler hairs were **burned by candlelight** in front of the patient, scraped off with **broken glass**, dipped into a jungjong(alcohol) jar, and immediately sliced into the narrowed nostrils to be infused into the elixir.

In this way, when slicing velvet in Jongno 4 and 5 in the 1970s, **thinnest slicing** was recognised as the best cutting technique, and **I became very famous for this technique**, and it was this experience that brought me to the top of my game in the field of traditional medicine."

Jung-do Ilbo, 2024-09-19¹

¹ <https://m.joongdo.co.kr/view.php?key=20240919010005029>

2.2 Heat waves affect Korean deer industry

Korean deer farmers are struggling with artificial insemination (AI) due to extreme summer heat. Temperatures reached over 40°C in July, a crucial time for female deer health, and the heat continued through September's critical AI period. These conditions could lead to lower success rates and higher costs.

The Korea Deer Times, 2024-09-25

2.3 First Korean farmer to perform deer AI by himself

A Korean farmer has successfully performed AI on five deer independently, after five years of preparation. The farmer used **semen from New Zealand's Excell Breeding Centre in 2022**.

The Korea Deer Times, 2024-09-25

2.4 New research on Korean velvet quality

At a recent Korea Deer Farmers board meeting, Dr. Kim Yong-an presented findings on Korean deer velvet safety. The research showed fresh velvet contains no toxins, heavy metals, pesticides, or harmful microorganisms, and can reduce neuroinflammation. Testing of fresh, dried, and freeze-dried velvet confirmed strong immune-boosting properties. Dr. Kim suggested **switching impact marker from gangliosides to IGF-1 and EGF to improve market position against imported products**.

The Korea Deer Times, 2024-09-25

2.5 A supplements product for dogs contains deer velvet

Solmiopet, a pet nutrition brand, has launched Wellbreath, a nutritional supplement to help manage **bronchial stenosis**, a condition that is prevalent in **small breed dogs**. The **human-grade ingredients deer velvet** and mucopolysaccharide take care of bronchial tubes that are made up of congenitally weak cartilage, while bromelain is effective in relieving bronchial inflammation and expelling debris. Pear and bellflower help prevent coughing, the main cause of bronchial narrowing.

Baby Times, 2024-09-28²

2.6 KGC got the approval about blood sugar control function of red ginseng

Korea Ginseng Corp announced that its "Jung Kwan Jang" **red ginseng** has received recognition from Korea's Ministry of Food and Drug Safety for its ability to help **regulate blood sugar**. Clinical trials revealed reductions in fasting blood sugar, post-meal blood sugar, and HbA1c levels. The product also boosts insulin sensitivity. KGC plans to release a new brand, "GL Pro," with a specialized formula for blood sugar management later this month.

2.7 Deer velvet, the epitome of growth and regeneration

* AKOM News' imagery advertorial article about deer velvet.

Deer velvet is the freshly grown soft antler of a stag and is the only 100% regenerative tissue in mammals. (#Ethics, #RegenerativeMedicine, #Growth, #Recovery) It is the fastest growing tissue in mammals, growing 2cm per day, up

² <https://www.babytimes.co.kr/news/articleView.html?idxno=68163>

³ <https://www.esgeconomy.com/news/articleView.html?idxno=8383>

to 30kg in 70 days, once falling off and growing new every year. The reason it grows so fast and is tumour-free is because stag has a gene that makes it tumour-free despite rapid cell division, and deer velvet extract has also shown to inhibit cancer growth. Other benefits of deer velvet include growth, bone regeneration, nerve repair, immunity, anti-inflammatory, antioxidant, anti-ageing, recovery and nutritional factors. **The main sources of deer velvet are Russia and New Zealand**, and it is divided into bun-gol (tips), which is found in very small quantities, upper, middle, and lower, which is rich in minerals. **Korean traditional doctors will always be by the people's side.**

AKOM News, 2024-10-11⁴

2.8 Your guide to autumn health supplements

As summer transitions to autumn, managing health becomes vital due to temperature fluctuations affecting hormonal balance and mental well-being. People who experienced excessive summer sweating, respiratory issues, or digestive problems may benefit from autumn supplements. Traditional herbal medicines, particularly **musk Gongjian containing deer velvet and traditional herbs**, can help improve energy levels and immunity. However, it's essential to consult healthcare professionals before starting any supplement regimen, as dosages and types should be personalized for each individual's needs.

2.9 Illegal and false sales of deer velvet still exist in Korea

A gang of so-called 'TteoTtaBang' who sold health food as a cure-all has been busted again in Jeju. They even enlisted suppliers to make herbal medicine from **imported deer velvet** and sold it for 1 million won, with more than 1,700 victims.

The gang, which was caught by the Jeju police, was organised with 16 members, who shared roles in managing funds, sales and advertising, as well as preparing for crackdowns. The police detained three people who were in charge of general

⁴ https://www.akomnews.com/bbs/board.php?bo_table=news&wr_id=59958

⁵ <https://theviewers.co.kr/View.aspx?No=3410327>

management, and 13 members and public relations instructors, who will be sent to prosecutors. they have been operating illegally this in the centre of Jeju city since November 2021.

The gang sold food products such as deer velvet and mushrooms, as well as health supplements and bed mattresses. They falsely sold health foods as a cure for arthritis, charging eight times the price, and even attracted a traditional medicine manufacturer to make traditional medicine from imported deer velvet and cordyceps for 100,000 won (NZD 120) and sell it for 1 million won (NZD 1200).

More than 1,700 women over the age of 60 were identified as victims. There were also people with severe disabilities and people on welfare, with losses totalling 6.5 billion won.

2.11 Industry numbers continue to drop: 19,000 deer in 936 farms

Latest figures from December 2023 show Korean deer numbers have fallen to 19,000 across 936 farms - down 71 farms and 1,072 deer from 2022. Most farms (46.6%) have 1-9 deer, while only 0.8% manage herds over 200. The Chungcheongnam-do region holds 22.2% of all farms.

The Korea Deer Times, 2024-10-30

2.12 Wild deer incident

A wild deer attacked a woman near Gwanggyo reservoir in Suwon. The incident resulted in injuries requiring stitches. Local authorities have since captured the deer.

The Korea Deer Times, 2024-10-30

2.13 KGC red ginseng product sees record sales in blood sugar market

KGC Jeong Kwan Jang launched a **blood sugar management product** called 'GLPro' in October which includes **red ginseng as the main ingredient**. Within a month, they sold over 20,000 sets, earning about KRW 2.2 billion (NZD 2.7 million). This accounts for nearly 45% of Korea's monthly market for blood sugar health supplements. GLPro uses a special type of red ginseng that has been officially recognized for helping to control blood sugar levels. The product is popular among both existing and new customers, especially health-conscious seniors.

2.14 Deer farming in Korea challenges and hopes for the future

Kang Eun-hye of the Korea Deer Association has been addressing key challenges in Korea's deer farming industry. Overseeing events like the National Deer Velvet Competition gave her insight into the dedication of farmers but also highlighted issues such as an ageing farming population, declining farm numbers, rising competition from imported products, and concerns over antler removal practices. Kang is determined to support farmers and emphasises the need to attract younger generations to ensure the industry's sustainability.

2.15 An elk deer producing velvet for 28 years

A Jangseong farmer has farmed an elk stag for 28 years, consistently producing 12-13 kg of velvet annually. Has been early harvesting for the quality over size. The farmer credits a quiet, female-free environment for the stag's longevity.

The Korea Deer Times, 2024-12-10

2.16 High dosage of deer velvet: explained on NZ Deer Velvet Technical Manual

Following New Zealand Deer Velvet Technical Manual, effective daily dosage is 2,500 mg. Korean farmers traditionally use this standard for fresh velvet. Korean products typically contain higher velvet concentrations than some imports, leading some consumers to return to local suppliers.

2.17 2025 levy budget target of KRW 140 million

The deer industry levy target for 2025 is set at 140 million won including government funding, down 20 million from 2024. This will fund consumer promotion, farmer training, and industry meetings, though the National Deer Velvet Competition will be scaled back. The levy receives matching government funding.

The Korea Deer Times, 2024-12-10

2.18 Tour of New Zealand's deer velvet industry with Traditional medicine practitioners

Hanpure shared their NZ visit story through AKOM News three times. AKOM News is a traditional medical industry news outlet run by the Association of Korean Medicine.

- **23rd Dec.** (A guest article by Hanpure): Detailed contents of the tour ([Link](#))
- **26th Nov.** (An article by the same reporter): Highlights of the tour ([Link](#))
- **5th Nov.** (An article by a reporter): Brief introduction to the tour itinerary ([Link](#))

The articles cover:

- A Korean delegation visited New Zealand to explore deer velvet production, at the invitation of Deer Industry New Zealand.
- The team, including academics and industry experts, toured key facilities such as PGG Wrightson, AgResearch, and Raincliff Station to study:
 - o Deer farming environments
 - o Velvet production processes
 - o Quality management systems
- Highlights included:
 - o Advanced tracking and grading technologies

- o Sustainable farming practices
- o Research on velvet's potential health benefits
- o Discussions on integrating traditional medicine with scientific research

The visit aimed to enhance understanding of New Zealand's deer velvet industry and promote future academic and industrial collaboration.

The delegation included both academic and industry representatives:

Professor Yoon Kyung Kim (Wonkwang Univ.), Professor Lee Dong-heon (Gachon Univ.), Dr Hyun-ki Shin, Dr Gil-ho Jung, Pharmacist Sori Moon, and Chung-mook Chung, CEO of Hanpure.

2024-12-23, AKOM News⁹

2.19 2023 deer and velvet production worth KRW 54.7 billion

The total production value of deer and velvet of South Korea for 2023 was about KRW 54.7 billion (NZD 68 million). This includes KRW 15 billion for deer and KRW 39.7 billion for velvet.

According to the Korea Deer Farmers Association, a significant drop in deer velvet production was observed, mainly due to a decrease in the number of deer. Factors affecting velvet production include changes in farming conditions, fluctuations in the elk numbers, and market prices. Despite challenges, velvet remains the major contributor to the industry's overall value.

(KRW, billion)	Deer	Velvet	Total
2019	11.7	39.2	50.9
2020	25.8	38.2	64
2021	15.9	39	54.9
2022	23.7	40	63.8
2023	15	39.7	54.7

2.20 Analysis of velvet supply trends: domestic and imports both decline

As of the end of 2023, **South Korea's domestic velvet production reached 65 tonnes**, valued at KRW 39 billion (NZD 49 million). Both domestic and imported velvet supply volumes have decreased compared to previous years, with imports dropping to 386 tonnes, valued at USD 49.23 million (NZD 87.3 million).

Domestic velvet's share of supply declined from 17.4% in 2017 to 14.6% in 2023, reflecting reduced production and increased competition. Factors such as fewer deer and unstable distribution channels have contributed to the decline.

	2015	2016	2017	2018	2019	2020	2021	2022	2023
Korean production volume (kg)	84,000	86,000	75,000	60,693	75,767	72,618	70,646	69,459	65,960
Korean production value (in 100 million KRW)	44,100	45,150	39,375	34,911	39,181	38,200	39,010	40,064	39,762
Import volume (kg)	433,000	435,000	354,000	411,591	363,100	332,488	353,940	408,864	386,641
Import value (thousand USD)	32,290	50,088	41,533	52,568	46,741	48,028	52,131	61,915	49,237
Market share of Korean (%)	16.2	16.5	17.4	12.9	17.3	17.8	16.5	14.5	14.6

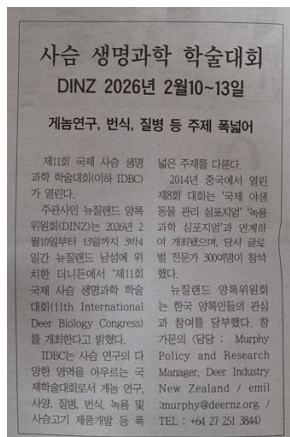

The Korea Deer Times, 2024-12-25

2.21 International Deer Biology Congress

The 11th International Deer Biology Congress (IDBC) is scheduled to be held in Dunedin, New Zealand, from February 10-13, 2026, organized by DINZ (Deer Industry New Zealand). This congress will cover various aspects of deer science including Game development/research, Disease management, Treatment and other related topics.

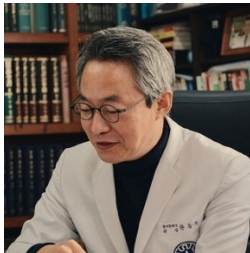

The IDBC is an international scientific conference that covers various fields including deer research, commercialization, disease management, breeding, product development, and related subjects. For context, the 8th congress was held in China in 2014 and attracted around 3,000 international experts. For those interested in participating or seeking more information, you can contact: Emil Murphy - Policy and Research Manager.

The Korea Deer Times, 2024-12-25

2.22 Health column by Dr Dong-ha Han

A common belief in Korea suggests that giving children too much deer antler velvet (known as 'nokyong') can make them less intelligent as they grow up. This idea likely originated from historical anecdotes, such as palace officials in the Joseon Dynasty discouraging the use of precious nokyong by claiming it would harm intelligence. However, modern research indicates that nokyong may actually support brain health. Studies have shown that it can promote the formation of new nerve cells, inhibit brain cell damage, and enhance memory and learning abilities. Therefore, when prescribed appropriately by a qualified practitioner, nokyong can be beneficial for children's development. It's important to note that nokyong isn't suitable for everyone, especially those with certain health conditions, so professional consultation is essential before use.

3 News related with product launching

3.1 Samjin Pharm - Deer velvet black bellflower tonic

Brand <Product name>	Samjin < Deer velvet black-bellflower tonic >		
Company/Manufacturer	Samjin Pharm / Han-poong Nature Pharm		
Volume and type	600g (10g x 60 stick pouch)	Price in KRW	70,000
Product category	Liquid tea	Other ingredients	Bellflower root, Red ginseng, herbs
Deer velvet %	n/a	Origin of velvet	New Zealand

Samjin Pharm has launched 'Deer velvet black bellflower tonic' ahead of the Chuseok holiday.

Deer velvet is known to be rich in various nutrients such as protein, gangliosides, collagen, and minerals, and is made from **fermented deer velvet from a clean area in New Zealand**. To increase the absorption rate of deer velvet, a 37-degree low-temperature fermentation method using water and fermentation strains was applied to minimise the destruction of active ingredients and increase the absorption rate.

In addition, 6-year-old red ginseng, domestic pear concentrates, and speckled honey are combined in the golden ratio to make a highly concentrated stick that is steamed rather than runny. It also contains more than 10 traditional Korean medicinal ingredients such as reishi mushroom, astragalus, and celestial angelica for a deep flavour.

'It is suitable for those who feel fatigue and lethargy due to low physical strength, and those who usually use their throat a lot or have a dry throat,' said an official from Samjin Pharm. 'It is recommended as a gift for those who are grateful this Chuseok season.'

Medical News, 2024-09-02¹¹

3.2 KGC I-Pass Focusing

Brand <Product name>	KGC I-Pass < Focusing >		
Company/Manufacturer	KGC / KGC		
Volume and type	840ml liquid + 30.8g capsule (28 bottles of 30ml liquid + 550mg, 2 pills)	Price in KRW	174,000
Product category	Health Functional	Other	Red ginseng,

¹¹ <http://www.bosa.co.kr/news/articleView.html?idxno=2230245>

	Food	ingredients	Phosphatidylserine, Berries extract etc.
Deer velvet %	n/a	Origin of velvet	New Zealand

'I-Pass Focusing', launched by Jung Kwan-jang, is a brain and body care product based on red ginseng concentrate, which is officially recognised by the Ministry of Food and Drug Safety for its functions such as memory improvement, immunity improvement, and fatigue improvement. It is a dual formulation that combines tablet capsules and liquid, making it easy to consume anytime, anywhere.

'I-Pass Focusing' contains **phosphatidylserine, deer velvet**, and lion's mane mushroom. Phosphatidylserine is an ingredient officially recognised by the Ministry of Food and Drug Safety for its 'cognitive improvement' function. It provides a customised solution for brain dual care with the 'memory improvement' function of the main ingredient, red ginseng concentrates.

An official from KGC said, 'I-pass is a **brand specialising in youth/students**, and has been popular for nine consecutive years from 2014 to 2022, ranking first in youth red ginseng sales.' 'We are launching a differentiated new product to treat stress and fatigue for examinees ahead of **the entrance exam season**,' he added.

Money Today, 2024-10-04¹²

3.3 KGC Jangsu:Yul Jangsu JinAk

Brand <Product name>	KGC Jangsu:Yul < Jangsu JinAk >		
Company/Manufacturer	KGC / KGC		
Volume and type	1,500ml (50ml x 30pouches)	Price in KRW	210,000
Product category	Red ginseng beverage	Other ingredients	Red ginseng, Magnesium, Herbal roots mixture etc.
Deer velvet %	n/a	Origin of velvet	New Zealand

Jeong Kwan Jang's senior brand, 'Jangsu:Yul,' has introduced the 'Jangsu:Yul Jangsu Tonic,' designed to boost energy in seniors. The tonic features a patented blend of herbs like poria and dried rehmannia, 6-year-old red ginseng concentrate, magnesium, and premium deer velvet extract from New Zealand. It also uses allulose for a healthier sweetness.

The Jangsu:Yul range targets both seniors over 70 facing health challenges and active seniors, with products focusing on cognition, muscle health, and circulation.

3.4 KwangDong Deer Velvet Prostate Supplement

Brand <Product name>	KwangDong < Deer Velvet Prostate Supplement (Nokyong Jeonlipseon Bogam) >		
Company/Manufacturer	Kwang Dong Pharmaceutical / Kwang Dong Health Bio		
Volume and type	700mg x 56 capsules (39.2g)	Price in KRW	198,000*
Product category	Health Functional Food with the registered complex of deer velvet and Angelica Gigas Root	Other ingredients	Angelica Gigas Root as the the other component of complex. Other herbs, vit B etc.
Deer velvet %	Not specified	Origin of velvet	New Zealand

*price is not available online but available via phone sales only

On the 12th, KwangDong Pharmaceutical announced the launch of their new product through over five online media outlets, including *Dong-A Ilbo*, one of Korea's leading news companies.

This product features a unique *Nokyong & Danggui* complex extract, combining *Nokyong* (deer velvet) and *Danggui* (Angelica Gigas Root). It is the first deer velvet-based ingredient in Korea to receive individual recognition for functionality.

According to KwangDong, the *Nokyong & Danggui* complex extract has been scientifically proven to support prostate health and safety. The formula uses patented extraction techniques combining *Danggui*, *Nokyong* (deer velvet), and liquorice.

In a 12-week clinical trial at St. Mary's and St. Vincent's Hospitals (Catholic University of Korea), 122 men with prostate-related symptoms showed significant improvements. Results included a better IPSS(International Prostate Symptom Score), addressing areas like residual urination, urgency, weak flow, delayed urination, nocturia, and overall quality of life.

A company representative stated:

“KwangDong Deer Velvet Prostate Supplement is our first functional food containing individually recognised ingredients, including deer velvet, which has been officially approved by the Ministry of Food and Drug Safety. These ingredients are scientifically proven for safety and

¹³ <https://www.smedaily.co.kr/news/articleView.html?idxno=310534>

functionality, offering targeted support. We hope this product helps middle-aged men address prostate health—an often unspoken concern.”
